

A

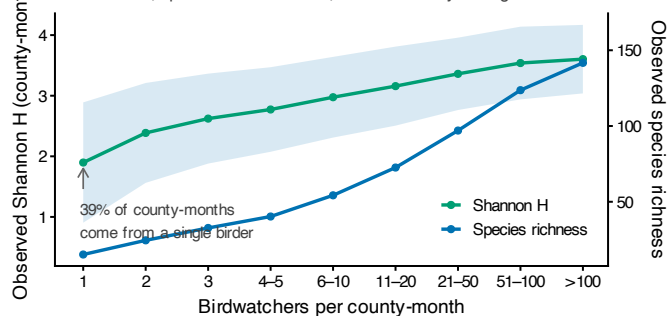

Birdwatching effort exploded in step with policy

Sample used by Zhang et al.; all series indexed to 2014 = 1

**B**

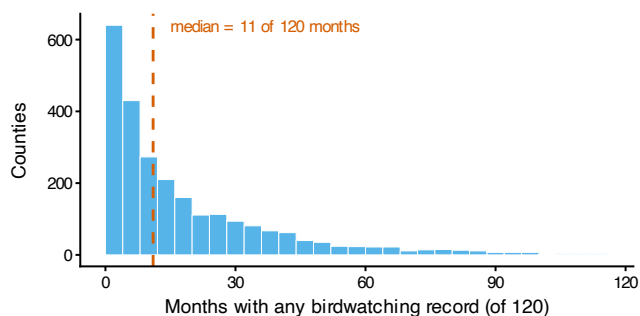

The outcome variable is a sampling-effort curve

Mean $\pm$ s.d.; species accumulation, not community change

**C**

Panel coverage is extremely sparse

54% of counties observed in ≤ 12 of 120 months

**D**

Uncleaned records corrupt the dependent variable

18 further county-months show ≥ 20 species yet $H < 0.2$
